Impact of Inflation on Retirement Income

Inflation negatively impacts your future income. The value of the amount of money you are saving today will not have the same value in the future. You will not be able to buy as much in the future with each dollar saved. In other words, inflation makes it necessary to save more because your dollars will be worth less in the future.

This form estimates how much net income you will need at retirement to keep the same standard of living that you have today (Net Pay per Month Today). This information may help you analyze your financial planning needs. It is based on information and assumptions provided by you regarding your financial situation.

You selected an Average Yearly Inflation rate of: 3%

Net Pay per Month Today \$2,714.51

Net Monthly Income at Retirement \$5,435.16 that includes: Net Annuity + Social Security/FERS Supplement + TSP

- In 13 years, the value of your net monthly income at retirement \$5,435.16 will be \$3,701.08.
- In order to maintain a standard of living equal in value to your current income \$2,714.51, you will need a net monthly income at retirement in 13 years of \$3,986.35.
- The difference between \$5,435.16 and \$3,986.35 is a surplus of \$1,448.81 in monthly retirement income in 13 years.
